7. Appendix A – Fact Sheet ................................................................. 12
8. Appendix B - Display Boards ......................................................... 13
1. Executive Summary

In March 2011, amendments to the Land Use Plan were adopted which remove obstacles to the vision identified by the university community during the three-year Vancouver Campus Plan process. Two important accomplishments of the Land Use Plan amendments are to:

- Make it possible to increase housing choices and improve housing affordability for our faculty, staff and students, thereby contributing to the creation of a more sustainable community
- Transfer housing density from the UBC Farm and other areas to support sustainable community development and UBC’s academic mission

Amendments to the South Campus Neighbourhood Plan are necessary to bring it into alignment with the Land Use Plan and achieve the two goals above. To achieve these goals, some of the density from the UBC Farm will be transferred to Wesbrook Place, mainly by increasing building heights in undeveloped areas from 3 storeys to 6 storeys. Some taller buildings will also be required in some places. The site formerly occupied by BC Research will also be added to the neighbourhood, including provisions for housing, parks and greenways. And additional housing density transfers from the Gage South area to south campus will be considered, to allow for additional rental housing for faculty, staff and students on campus. Other issues to be addressed through the process include reconfiguring road access to UBC Farm, preserving tree habitat associated with an eagle’s nest, and identifying a school site for the Vancouver School Board.

The amendment process will include multiple opportunities for community and stakeholder input as well as technical and design work, including public consultation events, an Advisory Planning Committee and a Technical Advisory Committee.

The public consultation process began with an open house at MBA House, June 28, 2011, 4:30pm – 7:00pm. The Open House introduced the objectives of the amendment process, presented background information on a series of display boards, and provided an opportunity for attendees to ask questions and offer feedback. Information on the display boards, along with sign-in sheets and feedback forms, was also translated into Korean and Chinese. Feedback forms were also available online until July 8th, 2011 and translated materials were provided to the UNA for distribution.

Thirty two people attended the open house and 11 completed feedback forms. Key issues raised related to the proposed amendments and amendment process include:

- concern about increased building height
- preserving green space and treed areas
- housing options for faculty and staff
- consideration of impacts of neighbourhood development on UBC Farm
2. Background

UBC is building a residential community as part of our dedication to achieving our overall sustainability goals, reducing the environmental and social impacts of being a commuter campus, and building a unique university community. The purpose of the neighbourhood plan is to provide detail on the types and locations of housing, shops and services and amenities. The neighbourhood plan guides development to help achieve this vision.

The South Campus Neighbourhood Plan, adopted in 2005, guides the development of the neighbourhood more commonly known as Wesbrook Place. A number of planning principles for the development of Wesbrook Place focused on sustainable community development and helped create a unique vision for a neighbourhood that is compact and complete. Key guiding principles include:

- Develop a vibrant, complete, ecologically sensitive neighbourhood that contributes to the larger UBC community with a strong emphasis on pedestrian and bicycle travel, good access to transit and a reduced need for commuting.
- Create a mixed-use neighbourhood with a distinct “urban village in the woods” character that integrates a variety of residential accommodations (to support work-study housing) with a commercial centre, community centre and school facilities.
- Use placemaking techniques to design spaces that encourage community gathering and interaction to enrich the lives of those who learn, work, live and visit here.
- Housing shall have a strong orientation to the fine-gained street and greenway network to encourage walking, to promote street activity and enhance neighbourhood safety.
- Ensure that stormwater systems incorporate Best Management Practices to manage stormwater flows to prevent flooding, to provide a community amenity where possible, and to manage discharges to the Fraser River and nearby slopes.
- The neighbourhood, as a building block for global sustainability, will achieve a high level of performance on factors such as energy use, water consumption, waste management, community health, social engagement and economic viability.

In March 2011, amendments to the Land Use Plan were adopted which remove obstacles to the vision identified by the university community during the three-year Vancouver Campus Plan process. Two important accomplishments of the Land Use Plan amendments are to:

- Make it possible to increase housing choices and improve housing affordability for our faculty, staff and students, thereby contributing to the creation of a more sustainable community
- Transfer housing density from the UBC Farm and other areas to support sustainable community development and UBC’s academic mission

Amendments to the South Campus Neighbourhood Plan are necessary to bring it into alignment with the Land Use Plan and achieve the two goals above. To achieve these goals, some of the density from the UBC Farm will be transferred to Wesbrook Place, mainly by increasing building heights in undeveloped areas from 3 storeys to 6 storeys. Some taller buildings will also be required in some
places. The site formerly occupied by BC Research will also be added to the neighbourhood, including provisions for housing, parks and greenways.

During the Land Use Plan amendment process, members of the student community asked UBC to consider re-designating the Gage South area (where the diesel bus loop is currently located) and removing the non-student housing from this area. Additional housing density transfers from the Gage South area to south campus will be considered, to allow for additional rental housing for faculty, staff and students on campus.

These changes will help ensure sufficient population for a livable and complete community in South Campus. Maintaining sufficient population in South Campus is key to ensuring year-round support and viability for the critical range of shops and services, transit options, amenities and the social infrastructure needed for a complete community. It will also help UBC meet its housing and sustainability goals.

The community will be constructed over many years and amenities such as parks, community centres, daycares and schools will be phased in as population increases require them.

Other issues to be addressed by the amendments include reconfiguring road access to UBC Farm, preserving tree habitat associated with an eagle’s nest, and identifying an additional school site for the Vancouver School Board.

**3. Public Consultation Process**

The South Campus (Wesbrook Place) Neighbourhood Plan Amendment process will include multiple opportunities for community and stakeholder input as well as technical and design work. Opportunities for public input include:

- June 28th, 2011: First public open house to launch amendment process (complete)
- September: Draft amendment presented for public input
- October: Revised amendments presented for public input

An Advisory Planning Committee and a Technical Advisory Committee have also been struck, both of which will meet throughout the process. Please visit the Campus & Community Planning website at [http://www.planning.ubc.ca/vancouver_home/consultations/south_campus_neighbourhood_amendments_process/public_consultation.php](http://www.planning.ubc.ca/vancouver_home/consultations/south_campus_neighbourhood_amendments_process/public_consultation.php) for meeting notes and more information about these two committees.

**4. Open House**

On June 28, 2011 the first public consultation events took place in the form of an open house from 4:30pm – 7:00pm at MBA House in Wesbrook Place.
The open house was hosted by senior members of C&CP and attended by Properties Trust, who were there to answer questions and provide additional context. A total of 32 people attended the open house.

Nine display boards communicated the background, nature of and process for developing the amendments, as well as the amendment process and opportunities for public input and consultation. One of the boards included space for visitors to write their own ideas, issues and concerns about amendments to the neighbourhood plan, and a two-page fact sheet summarizing the amendment process was produced as a take-away. Materials were available on the website and feedback forms were online until July 8th, 2011. Copies of the boards and fact sheet are available in appendix A.

Sign-in sheets, feedback forms and the information on the display boards in the form of hand-outs were provided in Chinese and Korean both at the event and on the website. Translated materials were also provided to the UNA for distribution.

A total of 11 feedback forms were received. Ten were completed on site at the open house and one was received online.

The event was promoted with advertisements in the Vancouver Courier and the Ubyssey, on the C&CP website and by e-mail notification to a select group of stakeholders, including:

- UBC Graduate Student Society
- UBC Alma Mater Society
- University Neighbourhoods Association
- Botanical Gardens
- UBC Farm
- UBC Athletics
- GVRD Parks
- Vancouver School Board
- C&CP Planning distribution list
5. Feedback Analysis

Of the 32 people who attended the open house, 11 completed feedback forms.

5.1. Summary

Respondents were asked to rate the importance of 8 different community characteristics on a scale of 1 – 5, where 1 was “Not Very Important” and 5 was “Very Important”. The vast majority of characteristics listed received rankings of 3 – 5. There were few scores below 3 and only “More Commercial & Retail” received a score of 1 from two different respondents.

When considering only rankings of 4 and 5 (“Important/Very Important”), parks and green space ranked highest with all 11, or 100%, of respondents rating them as “important/very important”. Access to public transit ranked 2nd with 9 respondents (81%) rating it as “important/very important”, and the new community centre came in 3rd with 8 respondents (72%) giving it a ranking of “important/very important”. Stormwater management and green buildings each received rankings of “important/very important” from 65% of attendees, while schools, and commercial and retail received “important/very important rankings from 45%. District energy received the lowest score with 36% ranking it in the “important/very important” category.

Respondents were also asked to share their thoughts on the issues to be addressed through the amendment process as well as other comments related to South Campus. Key issues raised related to the proposed amendments and amendment process, with references made to each by three (27%) or four (36%) separate respondents include:

- concern about increased building height
- preserving green space and treed areas
- housing options for faculty and staff
- consideration of impacts of neighbourhood development on UBC Farm

Most of the feedback on the feedback forms was also reiterated on sticky-notes left by open house attendees on display board #8 that invited attendees share their ideas about what would make Wesbrook a vibrant community.
6. Detailed Feedback

Display Board #8: Share your ideas about what would make Wesbrook a vibrant community:

- Wesbrook Place needs more green space between buildings which are very close to each other – will help screen out noise too
- Height restriction of buildings – not more than 6 storeys/limit building height
- Reduce currently proposed housing densities
- Improve affordability and include provisions for young faculty with families
- Preserve the remainder of natural forests existing within the South Campus neighbourhood
- Increase tree retention areas
- Use the greenbelt as a visual, thermal and sound buffer for UBC Farm. Keep the understory instead of putting in grass
- Design for a main UBC Farm boundary greenway – retain a natural forest structure
- Give consideration to UBC Farm’s ability to assimilate and reuse materials and energy from the neighbourhood

Feedback Form Question 1: “How important are the following characteristics to you?”

7. Appendix A – Fact Sheet
South Campus Neighbourhood (Wesbrook Place) Plan Amendments

Amendments to the South Campus Neighbourhood (Wesbrook Place) Plan will help achieve a more sustainable community and transfer housing density from UBC Farm, which has been retained for sustainability teaching, research and innovation.

The Existing Plan

The purpose of the neighbourhood plan is to provide details on the types and locations of housing, shops, services and amenities. The neighbourhood plan guides development to help achieve this vision.

The South Campus Neighbourhood Plan was adopted in 2005, after an almost two year process. This process helped create a unique vision for Wesbrook Place which is compact and complete. Here are some of the prominent features of the neighbourhood:

- Sustainable strategies, including for stormwater distribution, rain water retention, green roofs, sediment control and access to public transit
- Largest complement of housing on campus, including rental, student, faculty, staff, family and senior housing
- “Green Streets” and pedestrian-friendly corridors
- A commercial village anchored by Save-On Foods and complemented by a restaurant, coffee shop and other convenient shops and services
- Amenities such as parks, schools and a community centre

Aligning with the Land Use Plan

In March 2011, amendments to the Land Use Plan were adopted which address key issues the university community identified during the Vancouver Campus Plan process as obstacles to realizing that vision.

Two important accomplishments of the Land Use Plan amendments are to:

- Make it possible to increase housing choices and improve housing affordability for our faculty, staff and students, thereby contributing to the creation of a more sustainable community
- Transfer housing density from the UBC Farm and other areas to support sustainable community development and UBC’s academic mission

Continued on reverse
Some of the housing density from the UBC Farm will be transferred to Wesbrook Place, mainly by increasing building heights from 3 storeys to 6 storeys. Some taller buildings will also be required in some places.

“UBC is committed to building a model university community which is vibrant, livable and sustainable – a community which both supports and advances our academic mission.”

The site formerly occupied by BC Research will also be added to the neighbourhood, including provisions for housing, parks and greenways.

During the Land Use Plan amendment process, members of the student community asked UBC to consider re-designating the Gage South area (where the diesel bus loop is currently located) and removing the non-student housing from this area. Additional housing density transfers from the Gage South area to South Campus will be considered, to allow for additional rental housing for faculty, staff and students on campus.

Maintaining sufficient population in South Campus is key to ensuring year-round support and viability for the critical range of shops, services, transit options, amenities and social infrastructure needed for a complete community.

The other matters to be addressed include:
- reconfiguring road access to UBC Farm
- preserving tree habitat associated with an eagle’s nest
- identifying a school site for the Vancouver School Board

**Next Steps**

The amendment process will include multiple opportunities for community and stakeholder input as well as technical and design work.

Opportunities for public input include:
- An Advisory Planning Committee made up of community stakeholders will advise on the development of the amendments
- A Technical Advisory Committee of agency stakeholders will provide advice on technical issues, such as infrastructure and transportation
- Three public consultation events will be held throughout the development of the plan

**TIMELINE:**

• Information Update Report to UBC Board of Governors | Revision to amendments as required | Revised amendments presented for public input | Revised amendments referred to the Board of Governors for adoption |
8. Appendix B - Display Boards
1 Land Use Plan Amendments

UBC’s Land Use Plan is the “bylaw” establishing general land uses and policies for the entire 1,000-acre campus, with a special focus on non-institutional development.

UBC is committed to building a model university community which is vibrant, livable and sustainable – a community which both supports and advances our academic mission.

In March 2011, amendments to the Land Use Plan were adopted which remove obstacles to the vision identified by the university community during the three-year Vancouver Campus Plan process.

Two important accomplishments of the Land Use Plan amendments are to:

- Make it possible to increase housing choices and improve housing affordability for our faculty, staff and students, thereby contributing to the creation of a more sustainable community
- Transfer housing density from the UBC Farm and other areas to support sustainable community development and UBC’s academic mission

When UBC builds a new family housing community, a neighbourhood plan is done. These plans provide more detail on the types of housing, amenities and retail services the neighbourhood will have.

Changes to the South Campus Neighbourhood Plan are needed to bring it into alignment with the Land Use Plan.
A Sustainable Community with Great Amenities

UBC is building a residential community as part of our dedication to achieving our overall sustainability goals, reducing the environmental and social impacts of being a commuter campus and building a unique university community with great amenities.

No sustainable, Smart Growth community is complete or successful without a robust and integrated system of parks, community centres, schools and childcare.

Maintaining sufficient population in South Campus is key to ensuring year-round support and viability for the critical range of shops and services, transit options, amenities and social infrastructure needed for a complete community. The housing that was planned for UBC Farm must be transferred to ensure we have the population needed for a sustainable, complete community.

The year-round population at UBC is expected to reach 25,000 to 35,000 people. The community will be constructed over many years and amenities such as parks, community centres, daycares and schools will be phased in as population increases require them.

Without enough people living on campus year-round, UBC will not be able to meet its housing and sustainability goals.
The purpose of the neighbourhood plan is to provide detail on the types and locations of housing, shops, services and amenities. The neighbourhood plan guides development to help achieve this vision.

The South Campus Neighbourhood Plan guides the development of the neighbourhood more commonly known as Wesbrook Place. The plan was adopted in 2005, after an almost two year process which included:

- Plan development under the guidance of a multistakeholder working group
- An Advisory Planning Committee, comprising members of the neighbourhood, broad campus interests and adjacent communities in the UEL, provided public input to the plan
- A Technical Advisory Committee of agency stakeholders provided advice on technical requirements of the plan
- Consultation with the broader community ran concurrently with plan making and draft review. Open houses, media updates and website information, including online feedback mechanisms, occurred at key stages as the plan developed

This process helped create a unique vision for Wesbrook Place which is compact and complete. Here are some of the prominent features of the neighbourhood:

- Sustainable strategies, including stormwater distribution, rain water retention, green roofs, sediment control and access to public transit
- Largest complement of housing on campus, including rental, student, faculty and staff, family and senior housing
- “Green Streets” and pedestrian-friendly corridors
- A commercial village anchored by Save-On Foods and complemented by a restaurant, coffee shop and other convenient shops and services
- Amenities such as parks, schools and a community centre

Amendments to the South Campus Neighbourhood Plan (Wesbrook Place) will help achieve a more sustainable community and transfer some of the density from UBC Farm, which has been retained for sustainability teaching, research and innovation.
South Campus Neighbourhood Plan (Wesbrook Place)

A founding element of the land use arrangement is the pedestrian 'green network' and the park system. Green Streets connect the neighbourhood for pedestrians both within the South Campus neighbourhood and to adjoining areas. In this way, pedestrian and non-motorized movement is encouraged and facilitated. Connections to the surrounding areas - Pacific Spirit Regional Park, Hampton Place, the athletic fields, the Main Mall Greenway and the future Housing Reserve are established as extensions of the network. Integral to the green network at nodal points are sub-neighbourhood 'pocket' parks creating open space gathering and activity amenities for localised community use.

The sense that the village mixed-use centre is the heart of a 'village in the woods' is established by locating the community core beyond a 'green portal' of retained and redeveloped trees. Walking distance from 16th Avenue to the retail 'main street' is set at 200m. The community core draws together the elements that centre the focus of the neighbourhood - shops (including an 'anchor' grocery store), community centre, village residential (including seniors residential) and school. The village centre itself is located along the primary vehicular access point to the neighbourhood - enlivening the 'main street' which is bisected by the primary pedestrian Green Street. The proximity of the school to the village centre offers possibility for dual-use of community centre facilities.

The location of the school is seen as a critical element to the vitality and liveability of the the village neighbourhood. The school has been located immediately south of the village core, which satisfies the following criteria:

- Facilitates opportunities for dual-use of community centre facilities oriented on the primary pedestrian Green Street;
- Centrally located to offer immediate connection to the village centre;
- Frames the secondary neighbourhood access point on a collector roadway;
- Considers future integration of the NRC building;
- Provides accessibility from other University Town neighbourhoods; and
- Is flanked by open space, community uses and housing - rather than roadways.

The following illustrations are from the original neighbourhood plan.
When completed, Wesbrook Place will be the largest neighbourhood on UBC’s Vancouver campus including a mix of students, faculty, staff, parents, alumni and members of the general public.

Here are some of the exciting new developments underway in the South Campus neighbourhood.

**District energy and community energy planning:** A study is underway to determine the feasibility of a district energy system for new parts of South Campus. A new community energy plan is also being developed for all UBC’s residential neighbourhoods.

**Stormwater management:** UBC is currently developing a comprehensive stormwater management plan for this area as part of a larger plan for the entire campus.

**New Community Centre:** Because of the increased future population in Wesbrook Place, a larger (30,000 sft) community centre is being planned for the area. This will include a number of recreational facilities as well as daycare.

**Daycare:** The amended Land Use Plan creates a requirement for adding daycare as population grows. These new spaces will be developed following a formula based on the City of Vancouver’s practices.

**New high school:** A former research building is being converted into a new high school at East Mall and West 16th Avenue. The new high school is scheduled to open in Fall of 2012.
Objectives of Amendments: Housing Density Transfer

Amendments to the South Campus Neighbourhood Plan (Wesbrook Place) will help achieve a more sustainable community and transfer some of the housing density from UBC Farm, which has been retained for sustainability teaching, research and innovation.

In 1996, when UBC’s Land Use Plan was originally developed, the current site of the UBC Farm was designated “Future Housing Reserve”; this was prior to the Farm’s re-invention in the last decade. During the Vancouver Campus Plan process, the on- and off-campus communities asked the UBC Board of Governors to re-envision the academic potential of this area as a place for sustainability research and teaching.

In November 2008, the University’s Board of Governors committed that no family housing would be built on the UBC Farm, provided the allotted residential density could be transferred elsewhere. The Board also required that an academic plan be prepared for the UBC Farm that was rigorous and globally significant.

As a result of the Land Use Plan Amendments, some of the density will be transferred to Wesbrook Place, mainly by increasing building heights in undeveloped areas from 3 stories to 6 stories. Some taller buildings will also be required in some places.

The site formerly occupied by BC Research will also be added to the neighbourhood, including provisions for housing, parks and greenways. These two changes will help ensure sufficient population for a livable and complete community in South Campus.

During the Land Use Plan amendment process, members of the student community asked UBC to consider re-designating the Gage South area (where the diesel bus loop is currently located) and removing the non-student housing from this area. Additional housing density transfers from the Gage South area to South Campus will be considered, to allow for additional rental housing for faculty, staff and students on campus.
Objectives of Amendments: Other Items

Other matters to be addressed through the amendment process will support the development of a vibrant neighbourhood in South Campus.

The other issues to be addressed include:

- reconfiguring road access to UBC Farm
- preserving tree habitat associated with an eagle’s nest

• identifying a potential school site for the Vancouver School Board
A number of planning principles focused around sustainable community development were also created to guide the original plan.

The South Campus Neighbourhood Plan for the Wesbrook Place neighbourhood is founded on these key guiding principles:

• Develop a vibrant, complete, ecologically sensitive neighbourhood that contributes to the larger UBC community with a strong emphasis on pedestrian and bicycle travel, good access to transit and a reduced need for commuting.

• Create a mixed-use neighbourhood with a distinct “urban village in the woods” character that integrates a variety of residential accommodations (to support work-study housing) with a commercial centre, community centre and school facilities.

• Use placemaking techniques to design spaces that encourage community gathering and interaction to enrich the lives of those who learn, work, live and visit here.

• Housing shall have a strong orientation to the fine-gained street and greenway network to encourage walking, to promote street activity and enhance neighbourhood safety.

• Ensure that stormwater systems incorporate Best Management Practices to manage stormwater flows to prevent flooding, to provide a community amenity where possible, and to manage discharges to the Fraser River and nearby slopes.

• The neighbourhood, as a building block for global sustainability, will achieve a high level of performance on factors such as energy use, water consumption, waste management, community health, social engagement and economic viability.

Based on these principles, what do you think will make a vibrant community in Wesbrook Place? (Draw or write your ideas!)
Neighbourhood Plan Amendment Process

The amendment process will include multiple opportunities for community and stakeholder input as well as technical and design work.

Opportunities for public input include:

• An Advisory Planning Committee made up of community stakeholders will advise on the development of the amendments. This Committee will meet regularly throughout the process.

• A Technical Advisory Committee of agency stakeholders will provide advice on technical issues, such as infrastructure and transportation. This Committee will meet regularly throughout the process.

• Three public consultation events will be held during the process of developing the neighbourhood plan amendments.

TIMELINE:

- June
  - First public open house to launch amendment process

- Summer
  - Development of proposed amendments

- September
  - Draft amendments presented for public input
  - Information Update Report to UBC Board of Governors

- September/October
  - Revision to amendments as required

- October
  - Revised amendments presented for public input

- November
  - Revised amendments referred to the Board of Governors for adoption
